Courses in Knowledge Solution Development

Design ▶ Build ▶ Test ▶ Deploy

Embrace the full life cycle of your Knowledge Solutions

Knowledge Solutions

-The direct way to turning knowledge assets into revenue

Intellix has developed a new generation of intelligent software that automates intellectual decision processes. These processes include delivering investment advice, credit ratings, and insurance selection advice either internally to employees, or directly to customers on the Internet. Our market-leading software is based on artificial intelligence technology developed since 1986 that helps organisations turn their most vital asset - knowledge - into electronically manageable, portable and responsive components. This software is based on research into neural networks undertaken at Denmark's national research laboratory, Risoe.

Although decision-making is now recognised as one of the key aspects in all business processes, relatively few companies have implemented advanced systems that automate decision-making and provide automatic advice. These systems are built up around knowledge components that reflect an organisation's best knowledge within an area of expertise, and are extremely effective tools for information gathering and decision-making.

Tapping into the value of Knowledge Solutions

Intellix provides intuitive software products for building Knowledge Solutions that allows best practices to be captured and distributed throughout entire organisations. By use of Knowledge Solutions you can profit from the best of the worlds of Customer Relationship Management (CRM), Knowledge Management (KM) and Content Management (CM). Knowledge Solutions add value to your business by making features normally attributed to CRM, KM and CM systems operational. They are your shortcut to making the knowledge assets of your organisation relevant for every day business.

Intellix courses is your shortcut to making the most of your Knowledge Solutions. We help you to increase your productivity and efficiency by making the most of using our Knowledge Solution tools. Knowledge Solutions have broad impacts on the way you do business, and our course tracks are your direct way to empowering your company to exploit all the advantages.

Covering the full value chain

The Intellix courses are collated into curricula targeted at Intellix partners and customers. They satisfy the needs of Intellix customers and partners for being able to build and maintain their own

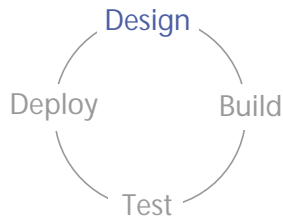

Knowledge Solutions independently. They also satisfy the needs of Intellix integration partners and business consultant partners for being able to interpret and assess customer needs in terms of Intellix' offerings.

The three layers of Intellix Solutions

Intellix solutions are based on Intellix' core products, the Intellix Designer and the Intellix Knowledge Server, which in turn are based on our patented neural network technology. This unique adaptive and intelligent technology is employed by these two core products to cover the full design-build-test-deploy life cycle of Knowledge Solutions.

The two core products are the tools that you use to build and maintain Knowledge Solutions in which you capture best practices of business experts. Finally, by rolling out Knowledge Solutions to support or automate intellectual decision processes you gain at least three advantages:

- 1) Increased quality of decisions leading to higher revenue,
- 2) increased efficiency of the decision processes ensuring that costs are lowered, and
- 3) increased consistency of decisions allowing you to cut costs for dealing with complaints and discussions of business policies.

Intellix courses will enable you to gain these advantages by yourself and to protect the added value from your Knowledge Solutions by maintaining and updating business policies and best practices on your own hand.

Introductory courses

Our introductory course track is the entry point to the world of Knowledge Solutions. The phases of designing and building knowledge domains are covered in a single start-from-scratch course. Matters of primary importance in the Deployment phase are outlined and introduced at a generalist level in another introductory course, that is a prerequisite for the courses in the solution building course track.

Examples of our introductory courses:

- Knowledge Mapping with the Intellix Designer
- Introduction to the Intellix Solution Framework

For business experts in charge of building and maintaining the knowledge solutions within their organisations the knowledge mapping course is an absolute must.

Solution building courses

Although the solution building courses cover the full life cycle of knowledge solution they are focused on deployment

issues and means for solving them. Covering distinct aspects of deployment issues associated with Knowledge Solutions they are geared to your very own special needs and challenges in the market. Among issues dealt with are platform considerations, client/server and n-tier architectures, security of web services, and scalability and performance.

Highly skilled professionals are teaching the courses. All courses are based on established standards and experience, and are providing the necessary theoretical foundations as well as making extensive use of hands-on exercises and labs.

Examples from our solution building course track:

- Using XML to build Small Business solutions
- Presentation Layout for Enterprise Solutions
- Storing Sessions with Enterprise Solutions
- Business Integration of Enterprise Solutions

After having accomplished the solution building course track you will have the same set of basic skills as we require from our own Intellix solution consultants.

Special offerings

In case you prefer to stage an Intellix course in-house for a class of colleagues / employees please contact us for a special offer. Intellix also offers customised course tracks composed of the Intellix courses tailored to the specific needs of your organisation.

Various rebates apply if you participate in all the courses in a course track or in case two or more persons from the same organisation participate in a course.
